LION | RESPONSE SIMULATOR

Learning how to assess dangerous environments, pinpoint hazardous situations, and act accordingly is key to becoming a well-prepared and proficient firefighter. To instruct your trainees on how to evaluate conditions or to show all scenarios possible on your purchased LION Training Solution, we offer a virtual training platform called LION | Response Simulator. With LION | RS, apply theoretical concepts into practice in a safe immersive environment.

LION | RS is a realistic 3D environment that simulates emergencies on your training container, unit, building structure and surrounding. The various systems within the LION | RS platform allow users to experience emergencies and practice response strategies.

The LION | RS is a perfect addition to real-life training to bridge the gap between theoretical and practical training. It allows the users to prepare and familiarise themselves with specific emergencies in a controlled and risk-free environment. After that, they are ready to go and apply what they have learnt in training, where the time pressure, stress and unforeseen factors can influence the training environment and as a result, the response of the trainees.

> Before using RS, we had no opportunity to train for bigger and more complex scenarios. Now by using RS, we have endless possibilities to create any possible scenario, at a much more affordable price point than live training

ACCESSIBLE IMMERSIVE TRAINING

LION | Response Simulator follows a simple 3-step process for immersive training experience:

> **Create** - Define the training goals and create detailed scenarios using a powerful and intuitive toolset, allowing you to bridge the gap between theoretical and practical training by adding virtual training.

> **Train** - Connect the trainees to the scenario and begin the training in the virtual environment. Trainees navigate the scenario and make decisions based on the situation they encounter.

> **Debrief** - Replay the entire training session, including all verbal communication. Evaluate trainee's response strategies and reflect on possible alternative approaches.

WHY

Incident scenario training in virtual environments is the new additional tool for better and safer training in the fire and safety industry:

> **Enhancing** - Improve your training routines and broaden your global practice opportunities by combining virtual and physical exercise.

> **Emergency Decision Making (EDM)** - Learn a new skill, ask 'what if' questions and make mistakes, without any safety risks.

> **Team strategies** - Train your position, day in and day out, to secure fast, efficient teamwork for when it really matters.
